

Orchard Blend

WHY USE A SOIL & PLANT CONDITIONER?...

Have you experienced: **Poor seedling vigour?**
 Crops that wilt, even in moist soil?
 Unthrifty plants, despite applying fertiliser?
 Excessive and/or unwanted vegetative growth?

All of the above issues become a distant memory when using Orchard Blend to condition your soil and plants during growth stages.

Orchard Blend will:

- 4 **improve seed germination**
- 4 **improve water penetration and availability**
- 4 **provide available phosphate**
- 4 **better regulate plant growth**
- 4 **improve the quality and shelf life of your fruit**

Orchard Blend provides a non leachable phosphate as well as the correct balance of nutrients to provide cellular strength to your crops. They will look fresher as the plants access the available silica, mineral and trace elements. Also, as the balance of your soil improves, the soil will now release moisture and nutrient more easily. This means, that plants now have more energy to grow healthier and set bigger and stronger flowers.

The combination of plant available silica, phosphate, minerals, trace elements and microbe activity increases the root structure of plants allowing them to search a larger area of soil for moisture and nutrients. Your crops will be productive for longer, no matter if the weather is wet or dry, hot or cold.

Compare “your” experience with the following people...

I started using Earthlife’s Soil Enhancement System during the 2002 season. Until then I had always struggled to achieve a pallet of No 23 Nectarines. The 2003 harvest has yielded 5 pallets of No 23 and I even had to grade out No16’s. Earthlife products have given my orchard a new lease of life.” **Geoff Prior Sunred Orchards**

Avocado’s “Our Avocado trees have really performed since taking on board your Soil Enhancement System. The compounding effect has been the ability of soil moisture retention, hence the appearance of worms in the soil and the trees outgrowing the toxicity problem that existed. Uniformity in fruit size and a richer flavour of the fruit was very noticeable this picking season. We whole-heartedly recommend Earthlife products to anyone wishing to improve their farming technique.” **Ernie Martin, Toowoomba**

I have trialled Earthlife’s Hortimate on a couple of blocks of my Zucchini during soil preparation. The untreated blocks suffered from the usual mosaic attack, however the blocks where Hortimate was used, had significantly less problems. **Col Nielson, Bauple**

I have been impressed with Earthlife’s technical and back-up support network. **Mathew Finnigan, Wondai**

Healthier Soil, Healthier Plants. It is that Simple...
