

HANDY INFORMATION SHEET

LAWN BLEND

What is it?

- ❖ A complete lawn conditioner and fertiliser, containing minerals, trace elements, available silica and soil friendly microbes.

What does it do?

❖ **Lawn Establishment**

From seed: Lawn Blend applied and incorporated one week prior to seeding will create the ideal environment for seed germination. Also promotes a healthier, more robust root system and stronger thicker leaf growth.

Newly laid turf: Encourages new root growth and reduces the period of stress. This increases your lawns' ability to withstand adverse conditions and heavy foot traffic. Also encourages earthworm activity within the root zone, which enhances nutrient availability. Discourages the presence of lawn grubs.

Lawn maintenance: Feeds and conditions established lawns, whilst promoting increased lateral growth. Less water will be required to keep your lawn looking fresh and healthy.

Where and when to use it?

- ❖ **Existing lawns:** Top-dress as required for that healthy fresh look.

Newly laid turf: Extremely beneficial when spread immediately under newly laid turf and on top of the base material.

How often do you use it?

- ❖ 3 times per year minimum, or as often as necessary (does not burn).

Application Rates

- ❖ **Seed lawns:** 50gm/m² (half a handful approx)
Newly laid turf: Minimum 100gm/m² (1 handful approx)
All existing lawns: Minimum 100gm/m² (1 handful approx)
Problem areas: Minimum 150gm/m² (One to two handfuls approx) alternatively, aerate and apply Garden Mate first (min. 300 gm/m²)

Coverage Areas

- ❖ 20kg Bag - up to 200m² @ 100gm/m²
40kg Bag - up to 400m² @ 100gm/m²

Other Important Information

- ❖ Ideal for use in other areas of the garden. Contains a balanced blend of fertiliser (including a non-leachable natural phosphate), minerals and trace elements that are important in the establishment & maintenance of healthy lawns.
Adjusts and maintains soil pH at the correct level.
Safe for Australian native plants.

LAWN BLEND

How to Enhance Your Lawn...

To achieve a low maintenance, healthy, green lawn that will handle heavy foot traffic, all things need to be in balance. If left unattended, imbalances will adversely affect the health of your lawn. Symptoms that show an imbalance may be present are yellowing or mottled leaves, unthrifty growth or the presence of lawn grubs.

Lawn Blend is able to enhance the growth of all lawns, as it not only feeds your lawn, but conditions the soil as well. This is achieved through Lawn Blend's ability to improve soil structure and provide the ideal environment for earthworm activity. This **naturally encourages better lawn growth**.

More than just a fertiliser...

Lawn Blend has similar abilities to Gypsum and Dolomite, in that it will reduce sodium levels in the soil profile, adjust and maintain pH while increasing the sweetness and friability of the soil.

Other benefits of Lawn Blend include the ability to increase root structure, improve soil moisture retention and enhance the moisture-nutrient exchange between the soil and the lawn's root system. As you would understand, by improving the root structure of the lawn, its ability to access nutrient is increased and is therefore more able to withstand adverse conditions.

That softer, thicker feel...

Lawn Blend contains a blend of minerals, microbes, nitrogen, phosphate, potassium, sulfur and trace elements that are known to assist in improving lawn growth. Increased resistance to disease and insects is achieved due to the improved nutrient uptake and enhanced health of the soil and lawn.

When Lawn Blend is applied, instead of forcing the grass to grow upright (excess nitrogen) more lateral growth is encouraged. This lateral growth increases the number of leaf blades present and gives lawns that lush, softer, thicker feel.

The wear factor...

You no longer need to worry about the "wear factor". Concerns about foot traffic is a thing of the past as Lawn Blend provides the correct balance of nutrients to provide cellular strength. The lawn will become harder wearing, resulting in less wear in high traffic areas.

Use Lawn Blend and your lawn will be greener, healthier and easier to care for.

Typical Analysis of Lawn Blend

Element	Nitrogen	Phosphorus	Potassium	Calcium	Magnesium	Silica	Iron	Sulfur
Percent	4.0	3.0	2.5	11.3	2.0	18.5	1.8	5.5
Plus Trace and Ultra Trace Elements
